DETAILED ACTION

1. This action is in response to the amendment filed on August 03, 2004.

2. Claims 1 – 21 are pending in this Application.

Claim Rejections - 35 USC 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1, 4, 8, 11, 15, and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kenner (U.S. Patent Number 6,314,565) in view of Stedman et al. (U.S. Patent Number 6,262,726) and further in view of Hsu (U.S. Patent Number 5,894,515).

In regard to Claim 1, Kenner teaches: (a) defining a configuration of the application program (Column 7, lines 5- 12); and (c) building the application program according to the configuration column 8, lines 30-4 1), as well as authenticating the particular user in response to the particular user requesting the application program (4:65 – 5: 5, also see 8: 1 – 5, which shows verifying user name before permitting download (i.e., authentication)). Kenner does not expressly disclose defining user configuration of the application program corresponding to a particular user of the application program, although Kenner does disclose a software update tool, which "analyzes configuration information from the user terminal" (4:54 – 58), and also being able to advise the user regarding the availability, of software which can be used to upgrade software preexisting on the user's terminal (4:58 – 61). Stedman, however, does teach storing user configurations of an operating system for the purposes of application customization (column 6, lines 58-62). Neither Kenner nor Stedman teach encrypting the configuration in a manifest file, authorizing a user in response to a user

Application/Control Number: 09/687,033

Art Unit: 2122

request for the application program, and decrypting the manifest file to produce a decrypted configuration. However, Hsu does teach encrypting data, authorizing a user, and in response to authorizing a user, decrypting the data (column 1, lines 13 – 21).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to perform the method of defining a configuration of the application program and building the application program according to a configuration, where the configuration is a user configuration, as taught by Stedman, since this allows different users to access different requested software from the same machine, and the configuration is encrypted in a manifest file, authorizing a user in response to a user request for the application program, and decrypting the manifest file to produce a decrypted configuration, as taught by Hsu, since this allows the manifest to remain secure and only viewable by a specific user.

Claims 8 and 15 are method and system Claims that correspond with article of manufacture Claim 1, and are rejected for the same reasons as Claim 1, where Kenner teaches a method (Figure 2) and system (Figure 1) for said article of manufacture of Claim 1.

For specific rejections of Claims 4,11, and 18, see the office action mailed on November 5th, 2003.

5. Claims 2, 3, 6, 7, 9, 10, 13, 14, 16, 17, 20, and 2 1 are rejected under 35 U.S.C.103 (a) as being unpatentable over Kenner (U.S. Patent Number 6,314,565) in view of Stedman et al. (U.S. Patent Number 6,262,726) and further in view of Hsu (U.S. Patent Number 5,894,515) and Hayes, Jr. (U.S. Patent Number 6,205,476).

For specific rejections of Claim 2, 3, 6, 7, 9, 10, 13, 14, 16, 17, 20, and 21, see the office action mailed on November 5th, 2003.

Response to Arguments

6. Applicant's arguments filed 08/03/2004 have been fully considered but they are not persuasive. See Examiner's response to arguments below.

Application/Control Number: 09/687,033

Art Unit: 2122

a) Argument (1), Applicant argues that in page 8 of Applicant's response dated 08/03/2004 that neither Kenner, Stedman nor Hsu discloses "authenticating the particular user in response to the particular user requesting the application program...".

Response (1), Examiner believes that prior art in fact does disclose this functionality. As set forth above in claims, and as disclosed in Kenner in column 4: 55 – 5: 5, and also in 8:1 – 5, Kenner teaches an updating tool which checks user configuration on a terminal during the process of updating. Kenner is able to suggest needed software based on a comparison made between user configuration files and a list of upgrades contained in a script file and further, being able to permit downloading of requested applications based on verification of user's configuration i.e., a user name (authentication).

Conclusion

7. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2122

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chuck Kendall whose telephone number is 571-2723698. The examiner can normally be reached on 10:00 am - 6:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tuan Dam can be reached on 571-2723695. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
